

Model AFD₁

Automatic Flocculant Dispenser

The Model AFD Automatic Flocculant Dispenser automatically feeds dry flocculant directly into your settling pond or pit system, while continuously mixing the pond water to aid in flocculant dispersion, and activation with suspended solids.

Comes completely pre-plumbed and pre-wired in a steel frame enclosure with removable access panels. Includes a Centrifugal pump, Poly cone tank sized to hold 100# of dry flocculant, and an automatic air valve for injecting the flocculants directly into the water discharge line.

Equipped with on/off main disconnect in NEMA 3R enclosure.

Power: 220VAC Single Phase

Requires dry compressed air 100psi Max.

Benefits to using flocculants:

- Typically can use smaller or shorter settling pond systems
- In many cases, the solids can be pumped out of the ponds, eliminating the need to drive your loader in
- Flocculants help keep plumbing from plugging with cementitious particles—and helps keep your pumps clean!
- When used properly, Flocculants will also lock up colorants, and many heavy metals.
- The base particle is bentonite clay—naturally occurring, and environmentally friendly.

As with all of our products, they are engineered from the ground up, and designed to be so simple, you can install, operate and maintain them yourself, without the need of a factory technician!

The BFK Difference!

BFK continues to expand our product line to offer a complete solution to your concrete washout and waste water issues.

The new AFD Flocculant Dispenser installs near your pond system to automatically feed and mix dry flocculants into your waste water, dropping the suspended solids in a smaller area, and ensuring reusable water back at your reclaimer.

A great compliment to your Concrete Reclamation system!

That's the BFK Difference!
